

### Learning Goals

1. Practice using a while loop so the syntax becomes more familiar

### Business Goal

This is a silly little short program just to practice syntax. No point in making it more than it is!

Here's the script.

```
Are we there yet? no
Are we there yet? no
Are we there yet? no
Are we there yet? no
Are we there yet? no
Are we there yet? silly
Huh? I didn't understand that.
Are we there yet? no
Are we there yet? no
Are we there yet? yes
Yay!
```

Use a while loop. Inside of it, print a question "Are we there yet?". Ask for input from the user at the keyboard. If they say no, just keep looping. If they say yes, then end the loop and print the Yay, then end.

If they say something other than "yes" or "no" then print the message, "Huh? I didn't understand that." Then continue asking the usual question.

### Coding Syntax Examples - Reference Guide

```
boolean keepGoing = true;
while (keepGoing)
{
    // do some stuff
}
```
