

Learning Goals

1. Practice creating and using your own functions/methods.
2. Be able to follow the flow of code execution between functions/methods.
3. Learn how to use context to infer the parameters of methods.

Business Goal

You'll be writing a set of reusable methods. Some code is already provided. Do not change the provided code. Just fill in the blanks _____ and write code in the `// TODO` sections, checking your work as you go. The program will tell you how you're doing when you run it.

The rest of the instructions are in the provided source code. Download it from the "download" area in the upper right.

You will need to copy the **ManyFunctions.java** file from your downloads folder, into your BlueJ project folder.
